

Motivation

Puwadol Dusadeerungsikul, Ph.D.

Department of Industrial Engineering , Faculty of Engineering

About Me

- Puwadol Dusadeerungsikul
 - Current position
 - Faculty member at Department of Industrial Engineering, Chulalongkorn University
 - Email: puwadol.d@chula.ac.th
 - Office: Building 4 Room 804
 - Office hours: After class and/or By appointment

Assignment

- 1-page essay or ≤ 400 words
 - Discuss benefits of knowing motivation and related theories when we need to work at a multi-national organization.
 - Provide examples of how to apply knowledge about motivation or give situations where knowing motivation theories are useful (under the context of multi-national organization.)
 - Submit at myCourseVille
 - Due date: check myCourseVille
 - Suggestion: complete it after class
 - Parts that exceed the limitation will not be read

Agenda

- Why do we need to learn about ***Motivation***?
- What is ***Motivation***?
- Employee motivation & Employee retention & Other behaviors in organizations
- Motivation theories

Why do we need to learn about *Motivation*?

- Motivation improves individual performance
 - Performance = *Ability* x **Motivation**
 - In other words,
 - Intellectual/Human capital
 - *Competence* x **Commitment**
 - [Knowledge + Skills + Attributes of individual] x **Willingness to work hard**
- Enhance **organizational performance**

What is Motivation?

- The amount of effort that an individual puts into doing something
 - Derived from Latin “Movere = to move”

What is Motivation?

- Willingness to exert high levels of effort toward organizational goals, conditioned by the effort's ability to satisfy some individual need (Robbin, 1993)

Stephen P. Robbins
Professor Emeritus of Management
at San Diego State University

What is Motivation?

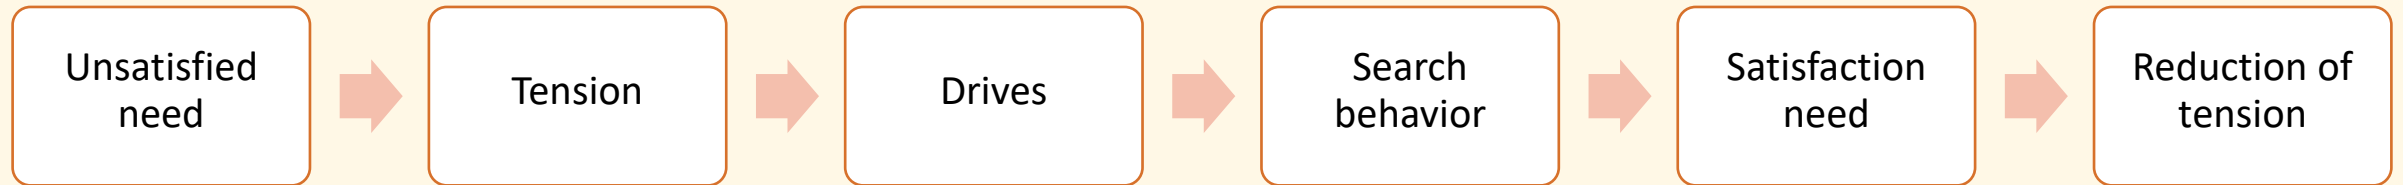

- Psychological process that causes the arousal, direction, and persistence of voluntary actions that are goal oriented (Mitchell, 1982)

Terence R. Mitchell
Professor Emeritus of Management
at University of Washington

Motivation Process

- Motivation and inspiration energize people, not by pushing them in the right direction but by satisfying basic human needs. (Kotter, 1990)

Adapted from Robbins (1993)

Motivation theories

I. Content Theories

Identify **needs** that motivate people's behavior

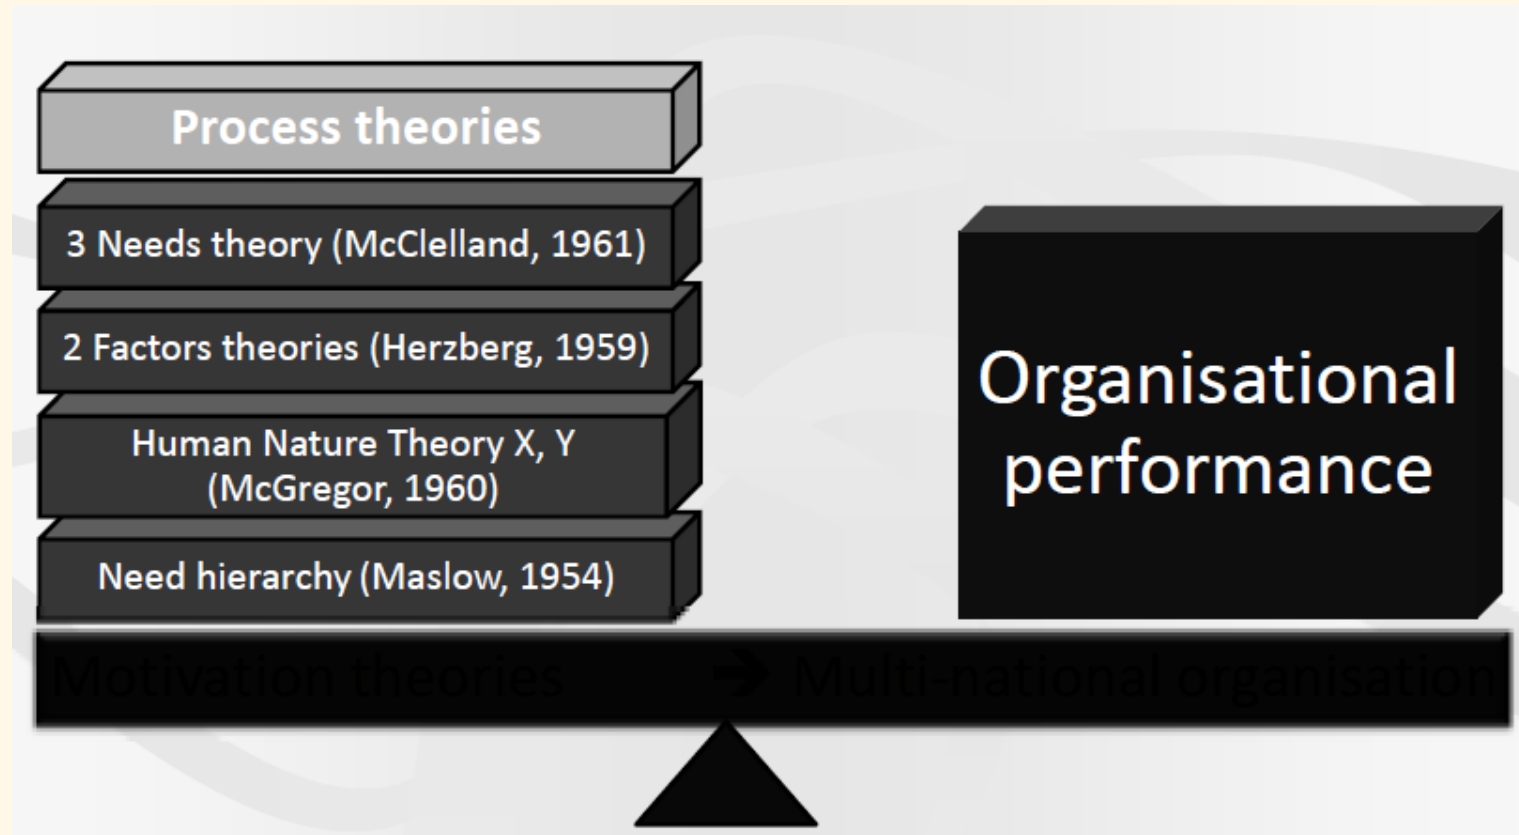

- *Hierarchy of needs*
- *Two factors*
- *Acquired needs*

II. Process Theories

focus on **thought processes** that act to motivate behavior

- *Equity*
- *Expectancy*

Motivation Theories & Organization Management

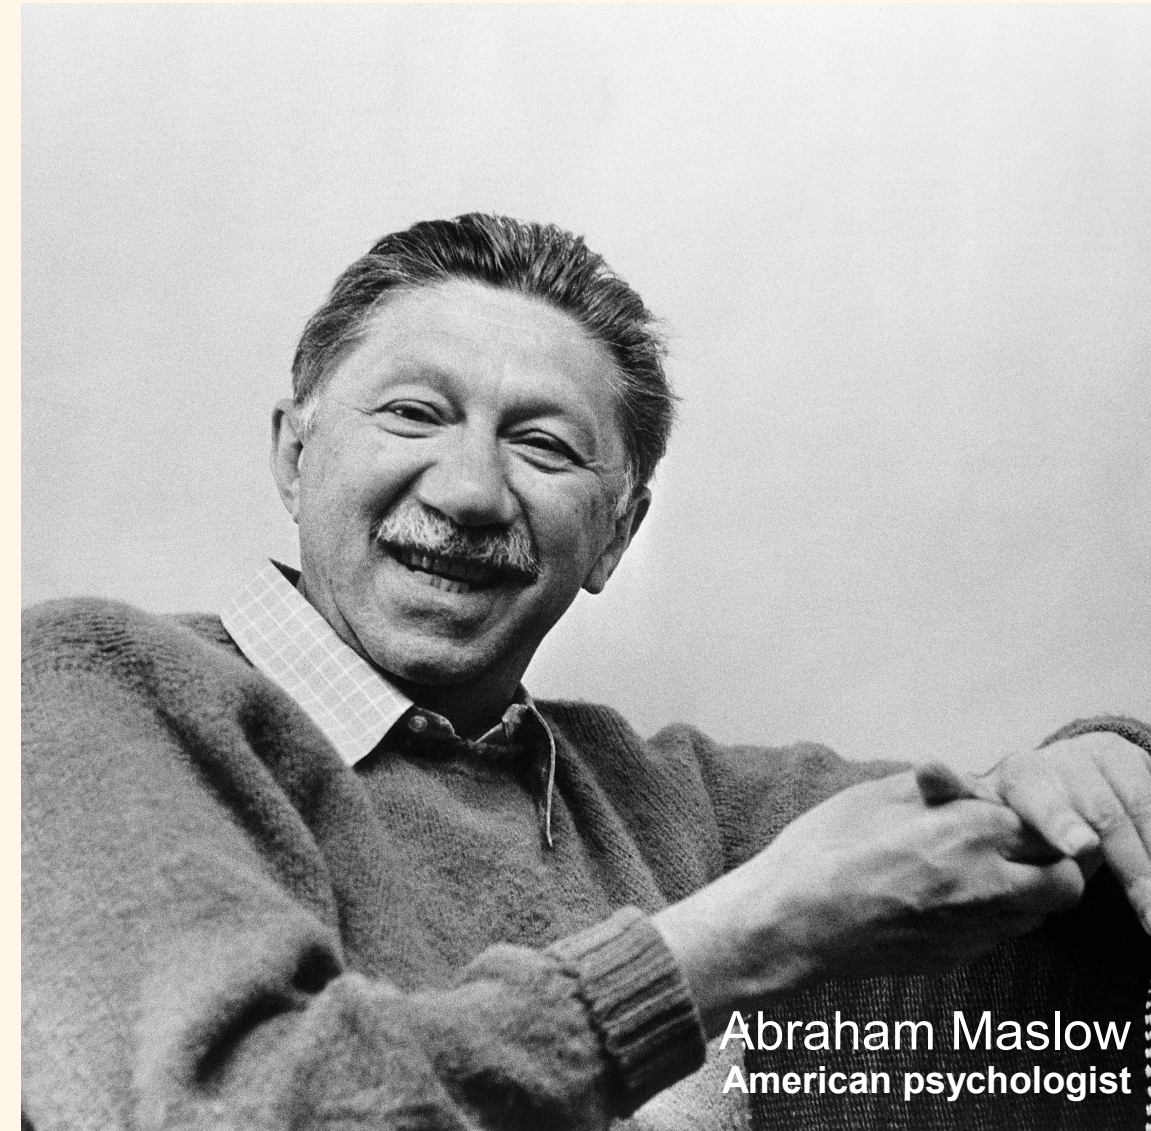

I. Content Theories

- Maslow's Hierarchy of Needs
- Herzberg's Motivation-Hygiene Theory
- McClelland's Learned Need Theory
- Douglas McGregor: Human nature

Maslow (1940s)

- **Higher order needs:**
 - Self-actualization (fulfilled self; use abilities to full)
 - Esteem (respect, prestige, recognition, sense of competence (self), mastery)
- **Lower order needs:**
 - Social (love, affection, sense of belonging-relating)
 - Safety (security, protection, stability in physical)
 - Physiological (water, food, warmth etc..)

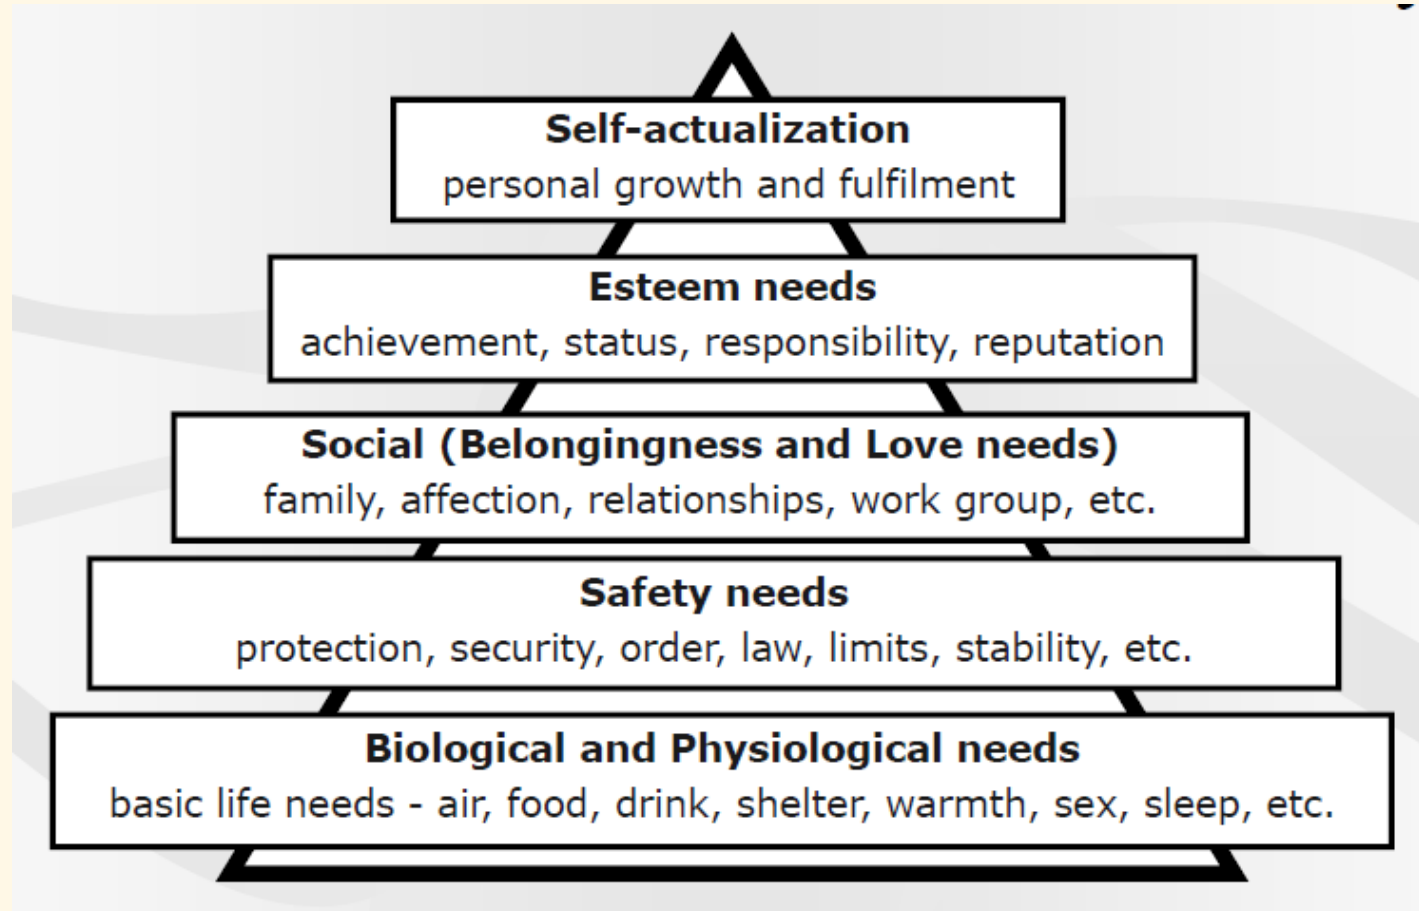

Abraham Maslow
American psychologist

Maslow Hierarchy Need Model

- A higher level need only arises when lower ones are already satisfied
- A satisfied need no longer dominates the individual's behavior, the next higher need takes over
- An unsatisfied need acts as a motivator-central to need-based motivation strategy
- The top-level needs are never fully satisfied

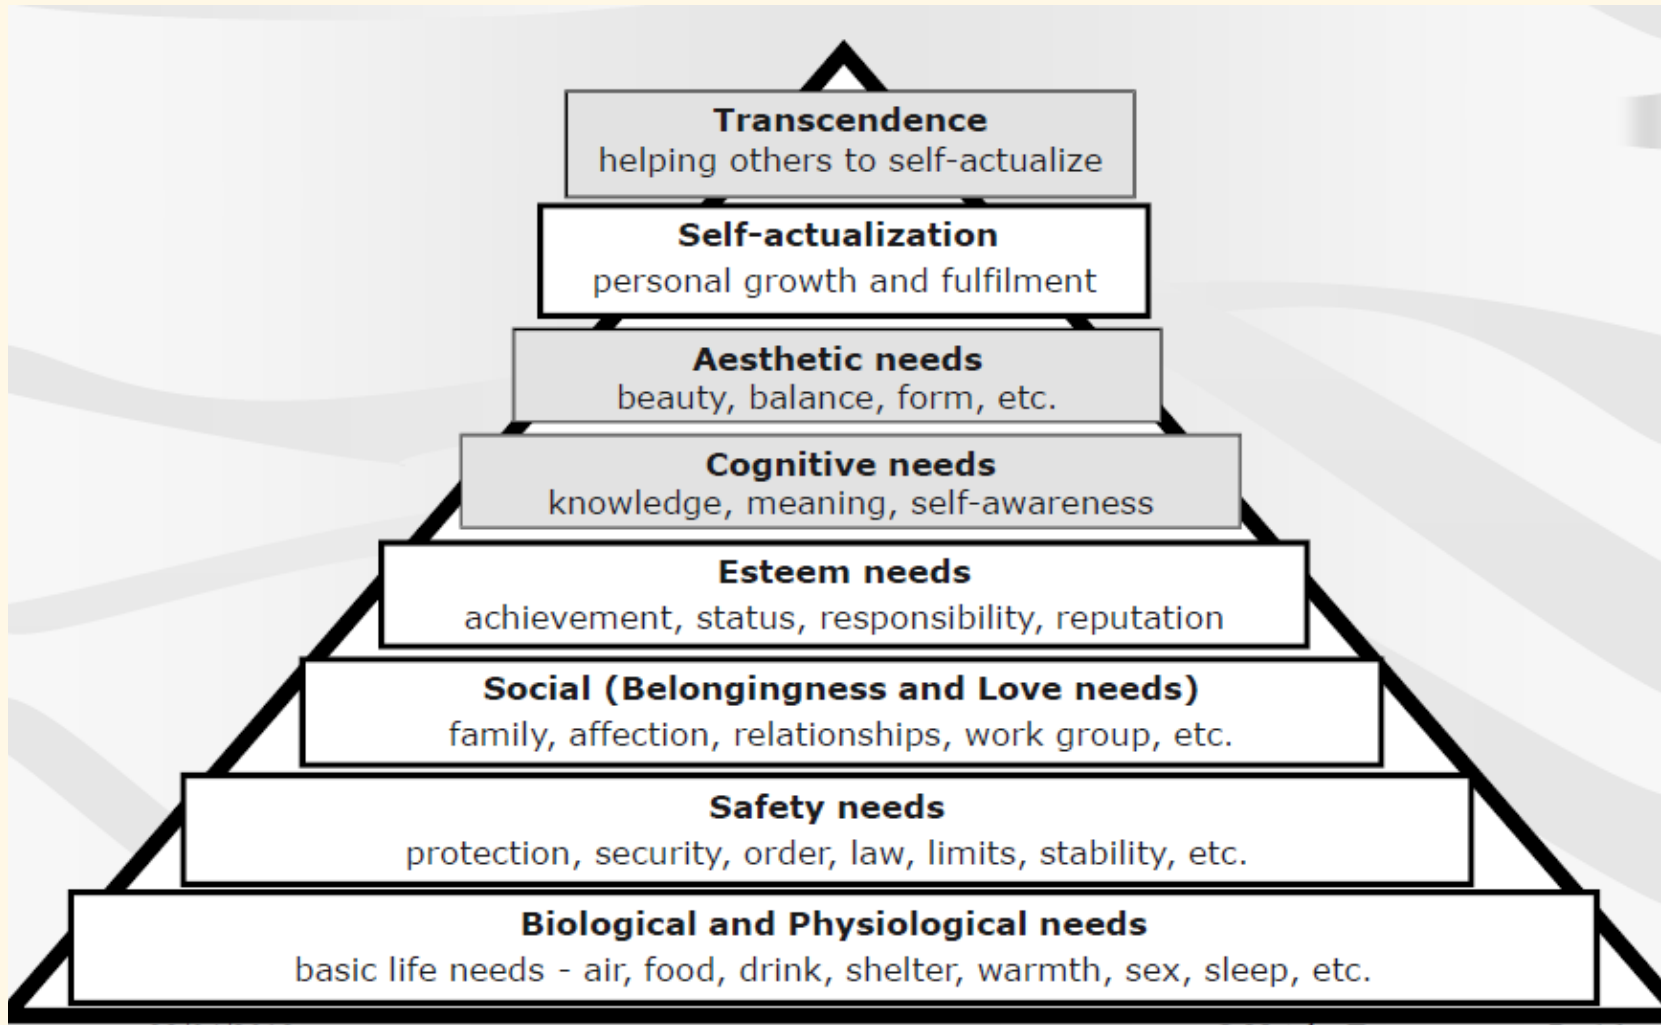

Abrahamson Maslow: Need hierarchy

Maslow's Hierarchy of Needs

Adapted Maslow: 8 Need hierarchy

Ways to satisfy employee's needs

Need		Example
Self-actualization		Give training
		Provide challenge, encourage creativity
Esteem		Design challenging job
		Praise & Award, delegate responsibility, training
Affiliation		Encourage social interaction (Group/Team)
Security	<i>Economic</i>	Wages and salaries, Benefits (Medical etc.)
	<i>Psychological</i>	Provide job description
		Solve employee problem, Avoid abrupt changes
	<i>Physical</i>	Working condition, Rest periods
Physiological		Cafeteria
		Vending machines, Drinking fountains

Quick self-test - 8-stage 'hierarchy of needs'

Biological Needs; Safety Needs; Belongingness and Love needs; Esteem Needs; Cognitive Needs; Aesthetic Needs; Self-Actualization Needs; Transcendence Needs

- A I am successful in life and/or work, and I'm recognized by my peers for being so. I'm satisfied with the responsibility and role that I have in life and/or work, my status and reputation, and my level of self-esteem.
- B I am part of, and loved by, my family. I have good relationships with my friends and colleagues- they accept me for who I am.
- C Above mostly everything else, I actively seek beauty, form and balance in things around me. My interest in beautiful culture and the arts is central to me.
- D My aim is self-knowledge and enlightenment. The most important thing to me is realizing my ultimate personal potential. I seek and welcome 'peak' experiences.

Quick self-test - 8-stage 'hierarchy of needs'

Biological Needs; Safety Needs; Belongingness and Love needs; Esteem Needs; Cognitive Needs; Aesthetic Needs; Self-Actualization Needs; Transcendence Needs

- E I generally feel safe and secure – job, home, etc – and protected from harm. My life generally has routine and structure – long periods of uncontrollable chaos are rare or none existent.
- F The most important thing to me is helping others to reach their ultimate potential, whatever that may be, even at my own expense.
- G Aside from dieting and personal choice, I never starve through lack of food, nor lack of money to buy food. Aside from the usual trauma of moving house, I have no worry at all about having somewhere to live – I have 'a roof over my head'.
- H Improving my self-awareness is one of my top priorities. The pursuit of knowledge and meaning of things, other than is necessary for my work, is extremely important to me.

Quick self-test - 8-stage 'hierarchy of needs'

Biological Needs; Safety Needs; Belongingness and Love needs; Esteem Needs; Cognitive Needs; Aesthetic Needs; Self-Actualization Needs; Transcendence Needs

- A I am successful in life and/or work, and I'm recognized by my peers for being so. I'm satisfied with the responsibility and role that I have in life and/or work, my status and reputation, and my level of self-esteem.
(Esteem Needs)
- B I am part of, and loved by, my family. I have good relationships with my friends and colleagues- they accept me for who I am.
(Belongingness and Love needs)
- C Above mostly everything else, I actively seek beauty, form and balance in things around me. My interest in beautiful culture and the arts is central to me.
(Aesthetic Needs)
- D My aim is self-knowledge and enlightenment. The most important thing to me is realizing my ultimate personal potential. I seek and welcome 'peak' experiences.
(Self-Actualization Needs)

Quick self-test - 8-stage 'hierarchy of needs'

Biological Needs; Safety Needs; Belongingness and Love needs; Esteem Needs; Cognitive Needs; Aesthetic Needs; Self-Actualization Needs; Transcendence Needs

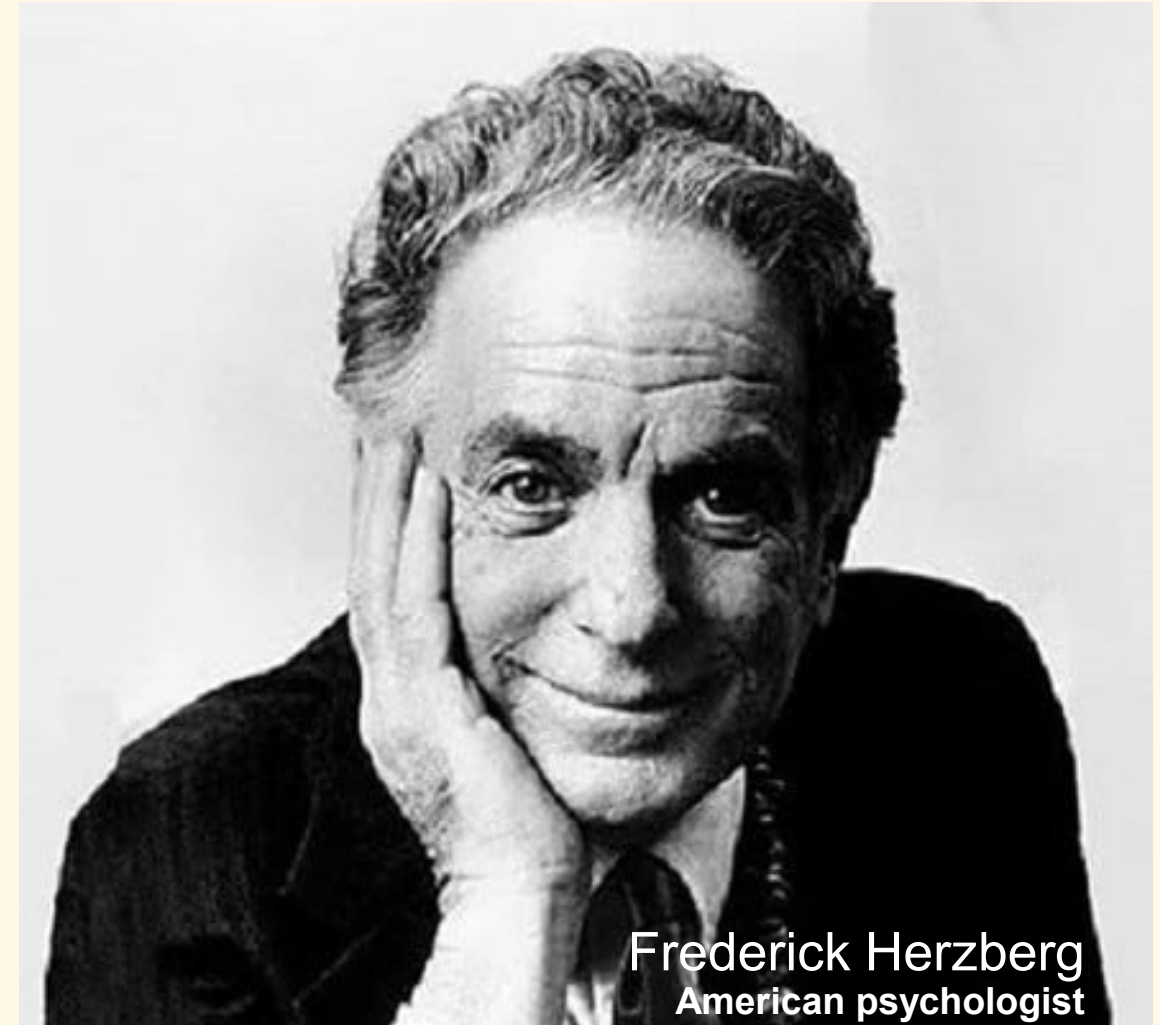

- E I generally feel safe and secure – job, home, etc – and protected from harm. My life generally has routine and structure – long periods of uncontrollable chaos are rare or none existent.
(Safety Needs)
- F The most important thing to me is helping others to reach their ultimate potential, whatever that may be, even at my own expense.
(Transcendence Needs)
- G Aside from dieting and personal choice, I never starve through lack of food, nor lack of money to buy food. Aside from the usual trauma of moving house, I have no worry at all about having somewhere to live – I have 'a roof over my head'.
(Biological Needs)
- H Improving my self-awareness is one of my top priorities. The pursuit of knowledge and meaning of things, other than is necessary for my work, is extremely important to me.
(Cognitive Needs)

Interpretation

- Maslow said that needs **1-4 are deficiency motivators** and are generally satisfied in order when the previous need is fully or partially satisfied.
 - If ticked above, they are probably satisfied
 - If a need ceases to be satisfied there is less or no motivation to strive to maintain or satisfy higher level needs
- Needs **5-8** are growth motivators. If ticked above they are likely to be a focus of **personal growth motivation**.

F. Herzberg (1960s)

- Motivator-hygiene (2 factor) that distinguishes between sources of work dissatisfaction (hygiene factors) and satisfaction (motivators)
- **Hygiene:** dissatisfies that are associated with aspects of a person's work setting (related to job context)
- **Motivator:** satisfiers that are associated with what people actually do in their work (related to job content)

Frederick Herzberg
American psychologist

Herzberg's Motivation-Hygiene Theory

• Hygiene Factors

- Company policy and administration
- Supervision
- Relationship with supervisor
- Work conditions
- Salary
- Relationships with peers
- Security

• Motivation Factors

- Achievement
- Recognition
- Interesting work
- Responsibility
- Advancement
- Growth

Frederick Herzberg: Two factor theory

Hygiene & Motivation Factors

How to motivate yourself and your team?

Hygiene Factors

Affect the dissatisfaction of a person, but are rarely identified as long-term satisfaction.

- Salary, status, security
- Physical working conditions
- supervision
- Interpersonal relations
- Organization, policies & administration

Motivation Factors

increase satisfaction but little effect on dissatisfaction

- Achievement
- Advancement/growth
- recognition
- responsibility
- Interest in the job

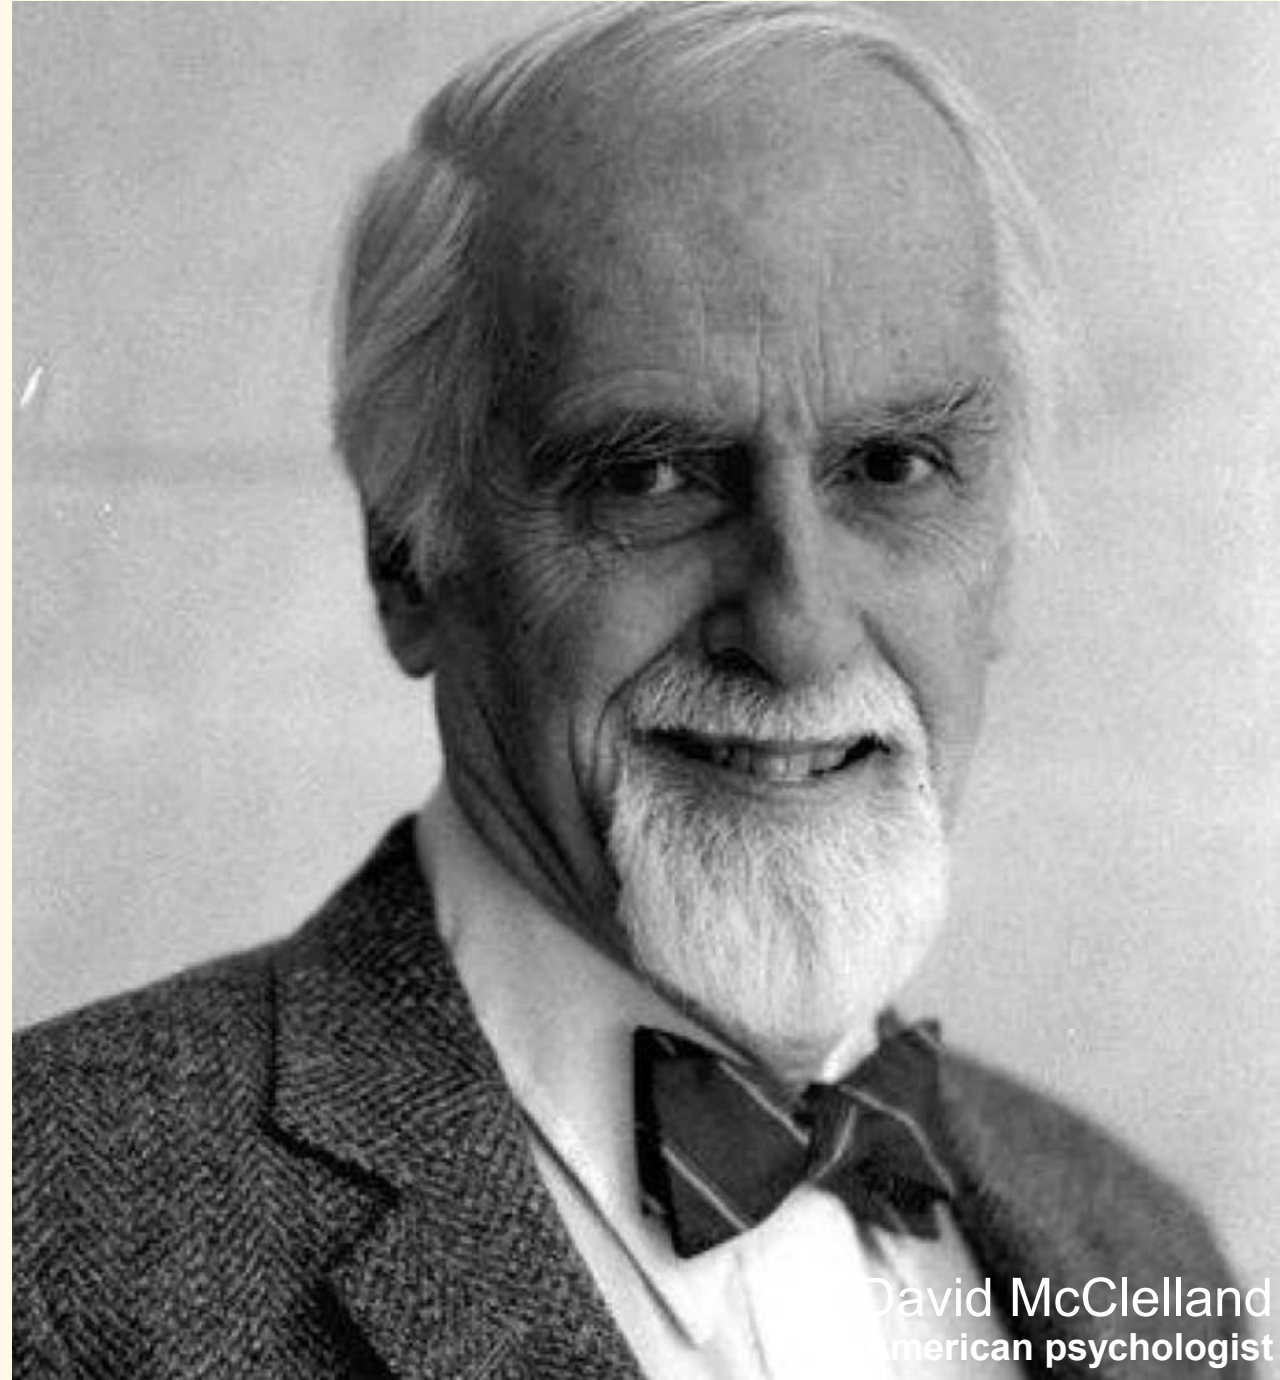

Hygiene factors found in work settings

Hygiene factors	Example
Organizational policies, procedure	Attendance rules, vacation schedules, grievance procedures, performance appraisal methods
Working conditions	Noise levels, safety, personal comfort, size of work area
Interpersonal relationships, Quality of supervision	Co-worker relations, customer relations, relationship with boss Technical competence of boss
Base salary	Hourly wage rate or salary

D. McClelland (1940s)

Acquired needs:

- **Need for achievement:** desire to do something better, solve problems, master complex tasks
- **Need for affiliation:** desire to establish, maintain friendly relationship with others
- **Need for power:** desire to control and influence others, be responsible for them

David McClelland
American psychologist

D. McClelland: Three learning needs theory

Douglas McGregor:

Human nature

Theory X & Theory Y

Theory X Assumptions:

- People inherently dislike work
- People must be forced or controlled or rewarded to do work to achieve objectives
- People prefer to be directed
- People resist to change

Theory Y Assumptions:

- People view work as being as natural as play and rest
- People will exercise self-direction and self-control toward achieving objectives they are committed to
- People learn to accept and seek responsibility

Douglas McGregor
American Management Professor at MIT

Source: McGregor Library Redediction

Douglas McGregor: Human nature

Theory X & Theory Y

Theory X Assumptions:

- People inherently dislike work
- People must be forced or controlled or rewarded to do work to achieve objectives
- People prefer to be directed
- People resist to change

Managing Theory X :

- Hard management approach
- Pressure, implicit threats, micromanagement, and tight controls-essentially and environment of command and control

Theory Y Assumptions:

- People view work as being as natural as play and rest
- People will exercise self-direction and self-control toward achieving objectives they are committed to
- People learn to accept and seek responsibility

Theory Y Assumptions:

- Soft management approach
- Permissive and seek harmony in the hopes that, in return, theory Y people will cooperate when asked

Following content theories, manager must -

1. Understand *how* employees differ in *what* they need from work;
2. Know *what* can be offered (i.e. rewards) to employees in response to their needs;
3. Know *how* to create work settings that give employees opportunities to satisfy their needs by contributing to task performance.

Motivation theories

I. Content Theories

Identify **needs** that motivate people's behavior

- *Hierarchy of needs*
- *Two factors*
- *Acquired needs*

II. Process Theories

focus on **thought processes** that act to motivate behavior

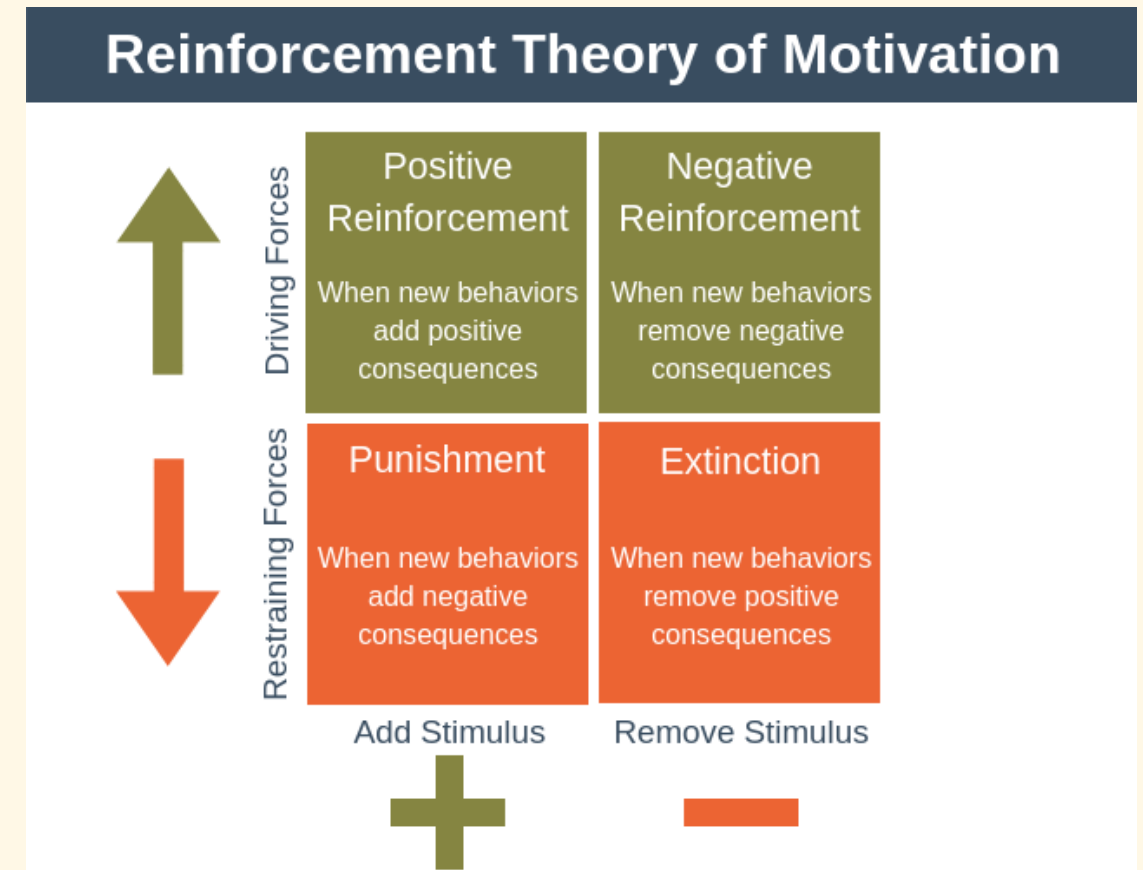

- *Equity*
- *Expectancy*

II. Process Theories

- Reinforcement Theory
- Goal Setting Theory
- Expectancy Theory
- Equity Theory

Reinforcement Theory

- **Giving a reward/reinforce** increases the likelihood a behavior will be repeated
- **Ignoring behavior** increases the likelihood that it will not be repeated
- **Punishment** usually puts an immediate end to a behavior but does not guarantee it will stop in the long run

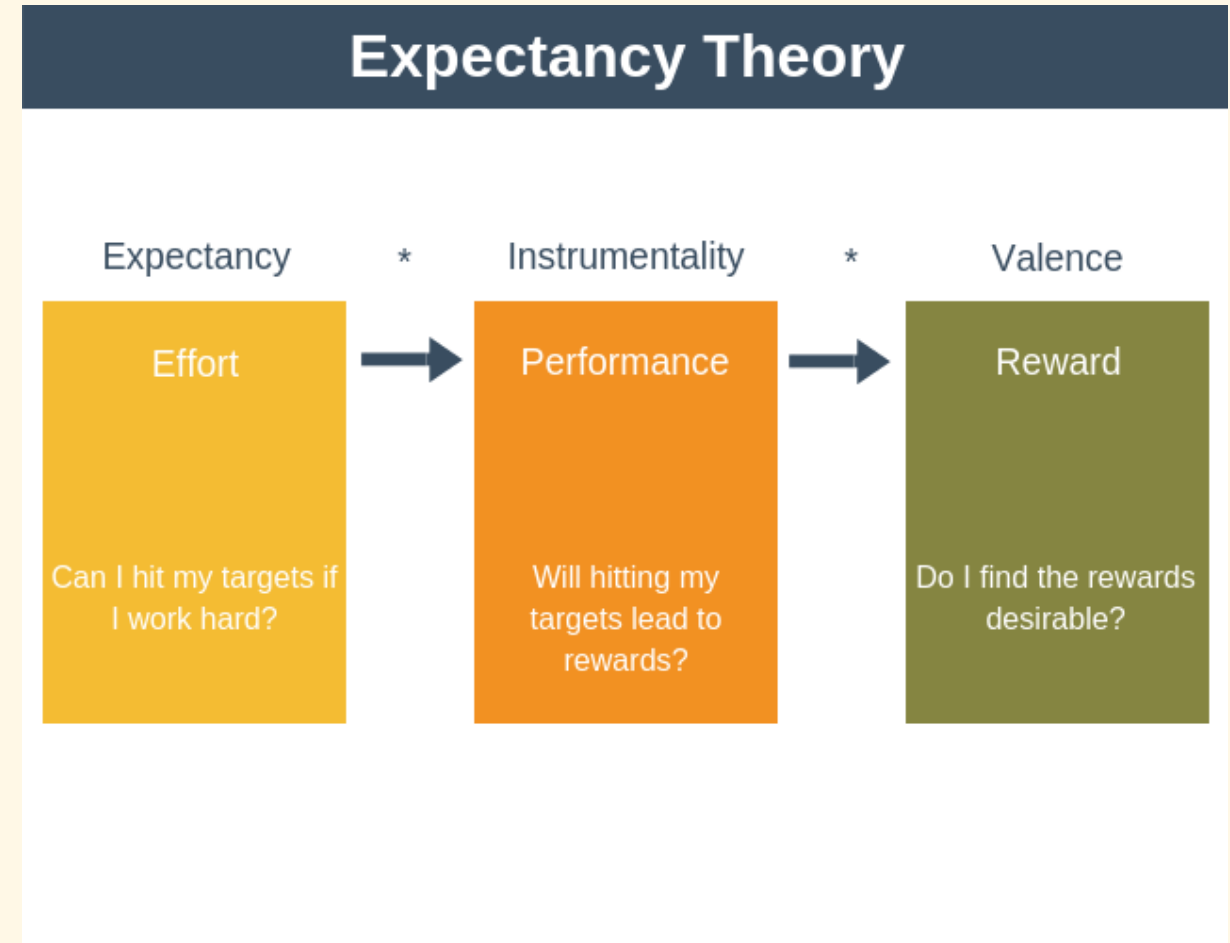

Goal Setting Theory

- Higher performance can be achieved by ...
 - **Setting goals** that are
 - Specific, rather than vague
 - Difficult, but achievable, rather than easy
 - **Giving feed back**, rather than no feedback
- Effectiveness of theory depends on
 - Commitment to goal
 - Self-efficacy

Expectancy model

- People are motivated to behave in ways that produce desired combinations of expected outcomes
- 2 expectancy theories
 - Vroom's original theory: **Valence, Instrumentality, and Expectancy** (VIE theory)
 - Porter and Lawler's extension

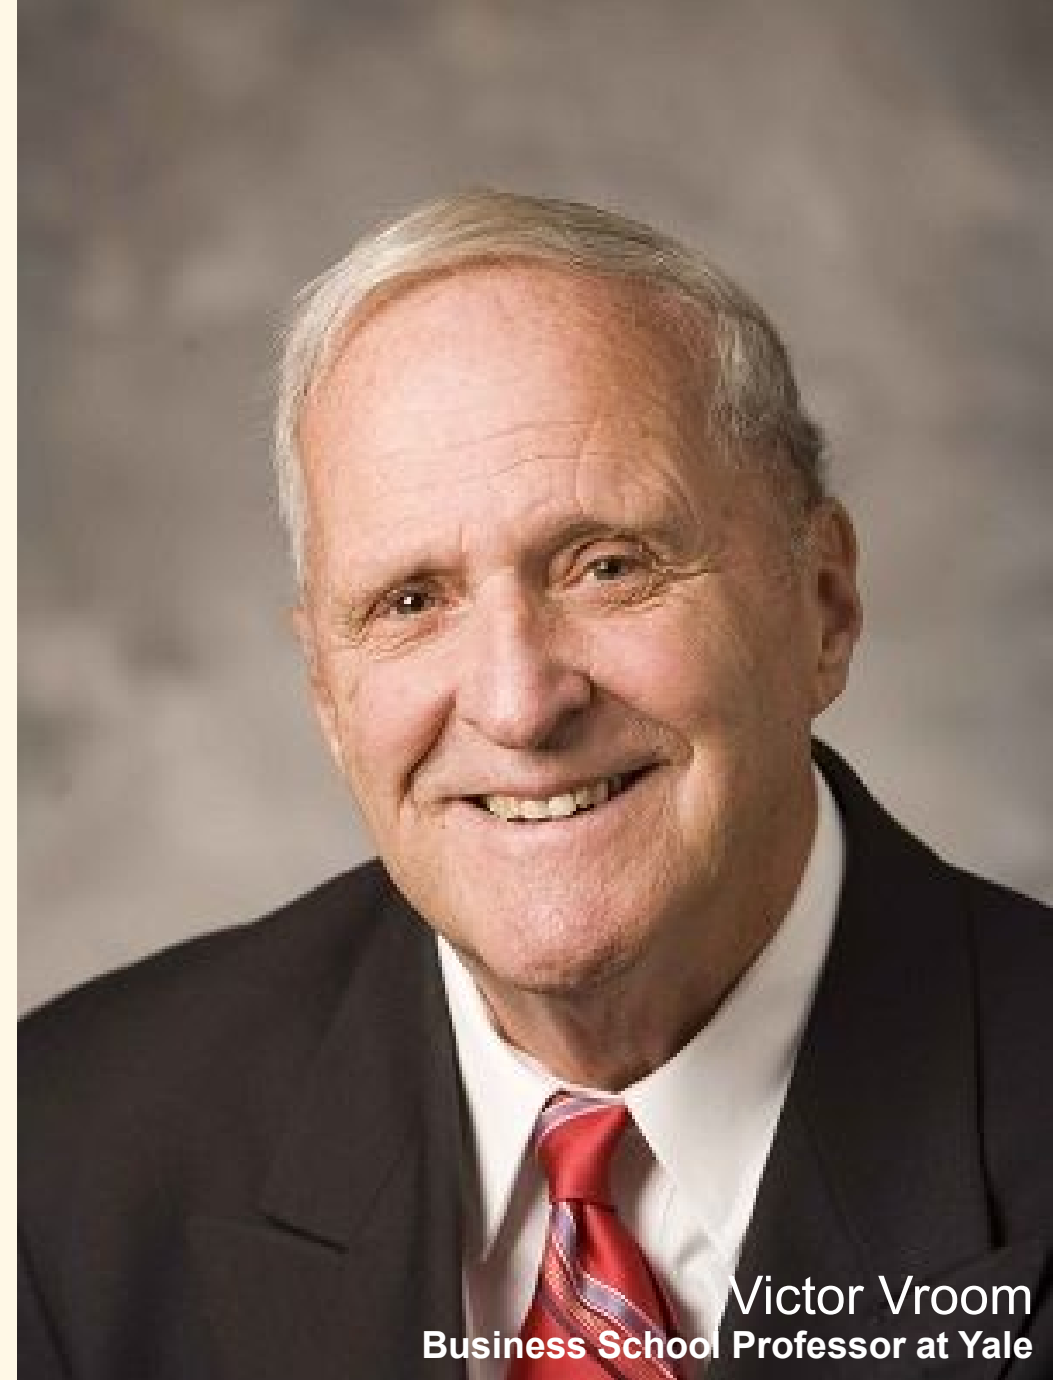

V. Vroom (1960s)

Three things that a manager must know to predict on employee task-related effort-

- **Expectancy (E)**: probability assigned by employee that work effort will be followed by a given level of achieved task performance;
- **Instrumentality (I)**: probability...that a given level of achieved task performance will lead to various work outcomes;
- **Valence (V)**: values attached by the employee to various work outcomes.

$$M = E \times I \times V$$

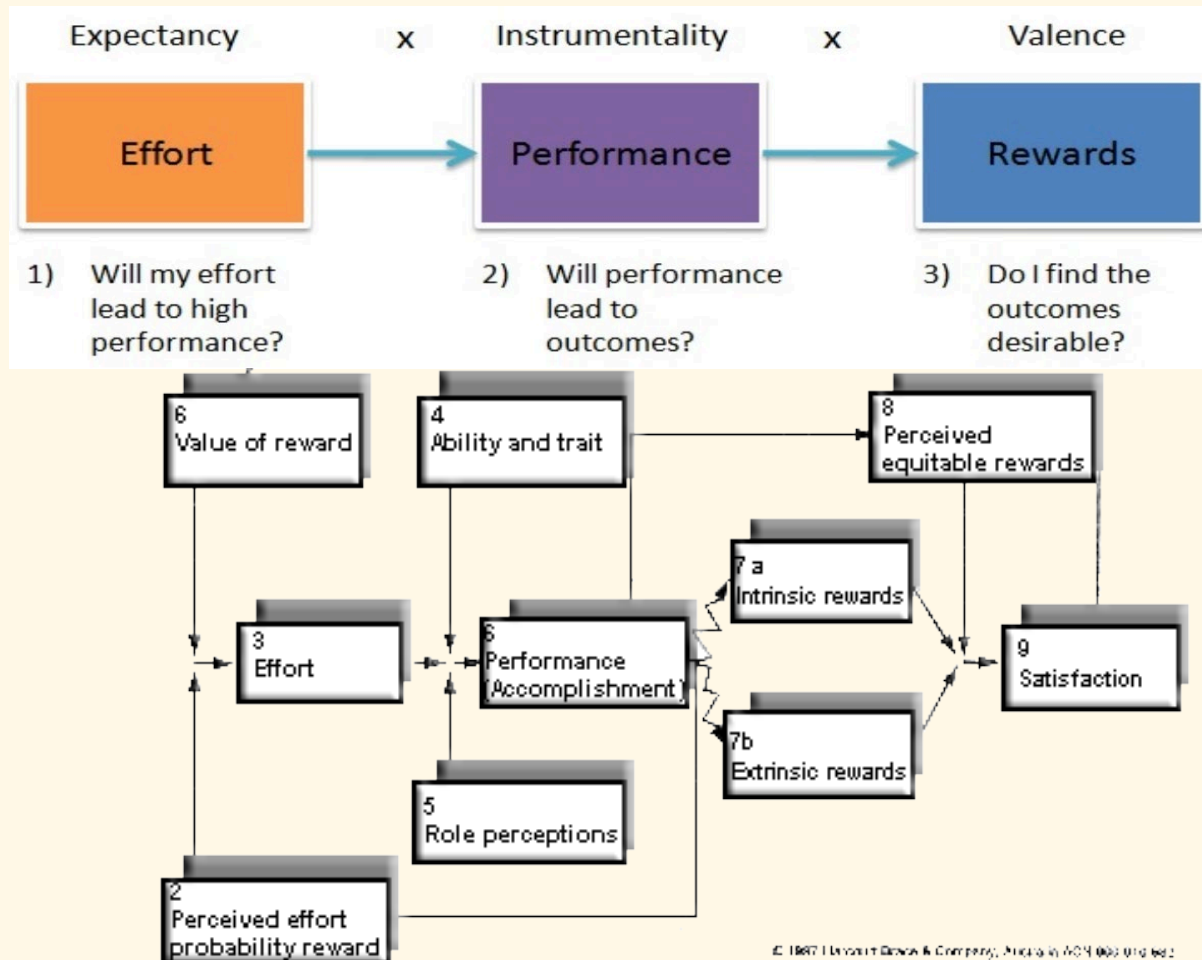

Victor Vroom
Business School Professor at Yale

Managerial implications of expectancy theory

E	“Can I achieve the desired level of task performance?”	Select people with ability, train them to use it, offer resource support, establish performance goals
I	“What work outcomes will be received as a result of the performance?”	Clarify psychological contract, communication performance-rewards by making actual reward contingent upon performance
V	“How high do I value the work outcome?”	Identify people’s needs or outcomes, adjust rewards to match them

Expectancy model

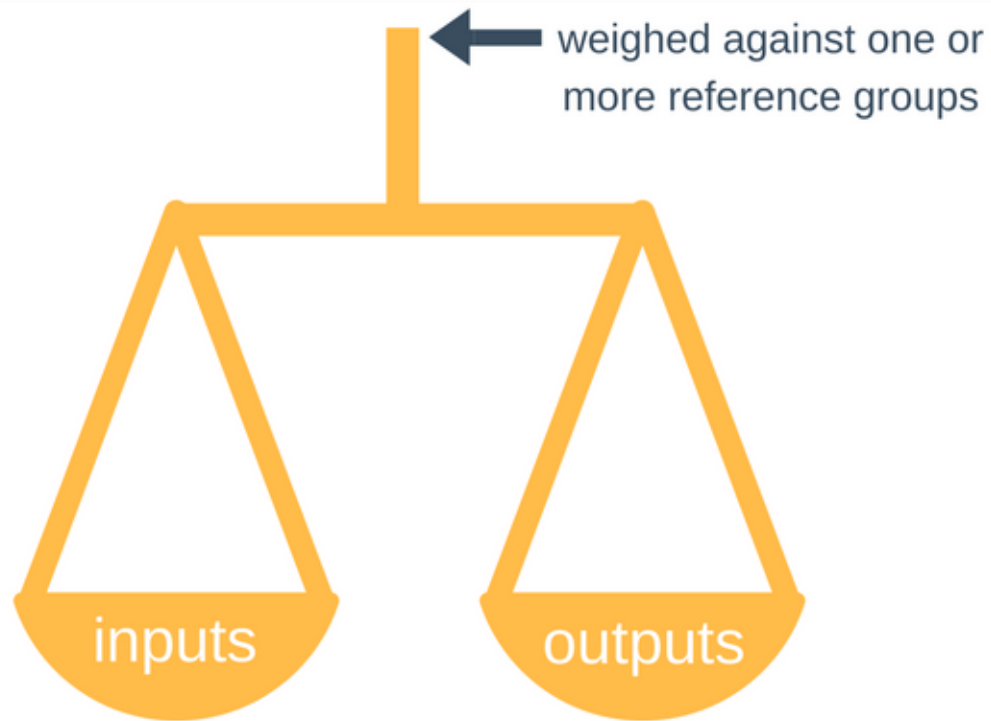

Vroom's theory (1964)

Porter & Lawler's extension theory (1968)

Equity Theory

Equity Theory

www.expertprogrammanagement.com

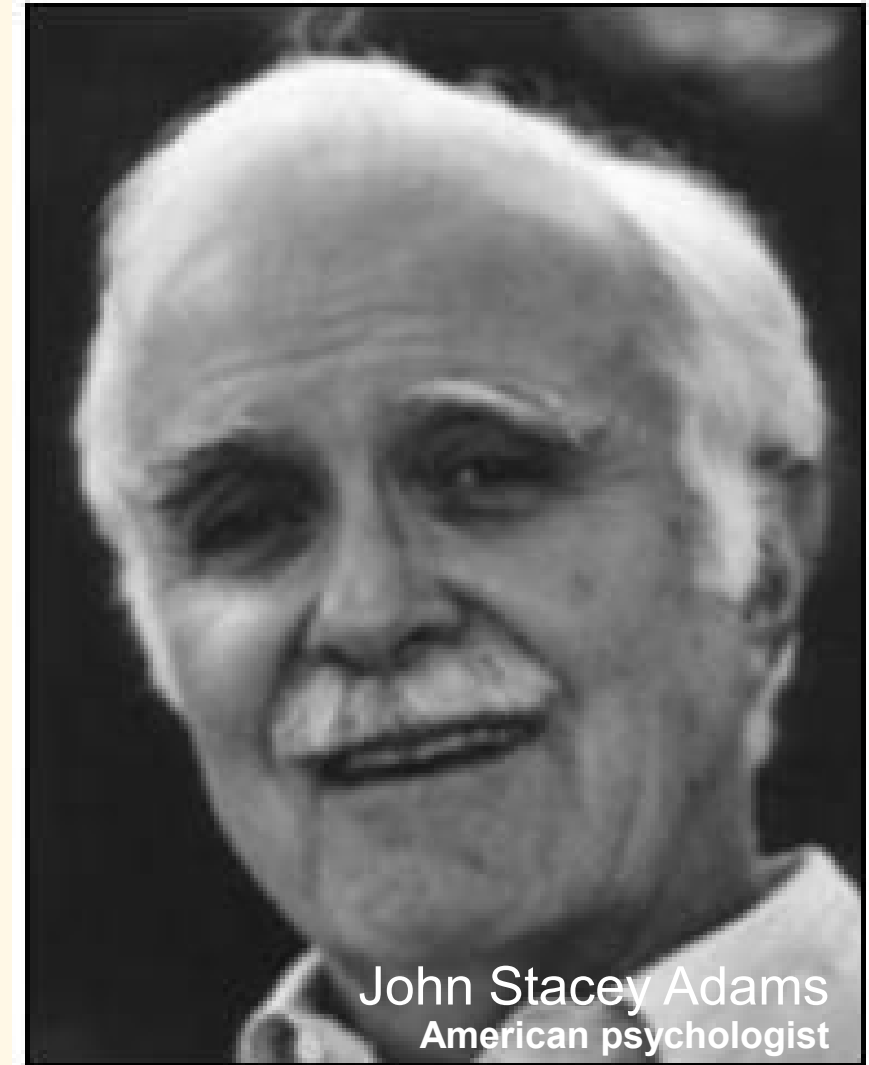

Equity Theory

$$\frac{\text{Individual outputs}}{\text{Individual inputs}} = \frac{\text{Other's output}}{\text{Other's input}}$$

www.expertprogrammanagement.com

J.S. Adams (1960s)

- **Equity** is based on social comparison, ppl. Gauge the fairness of their work outcomes compared to others, “felt inequity”.
- **Felt negative inequity** exists when employees feel they have received relatively less than others have in proportion to work input.
- **Felt positive inequity** exists when employees feel they have received relatively more than others have in proportion to work input.

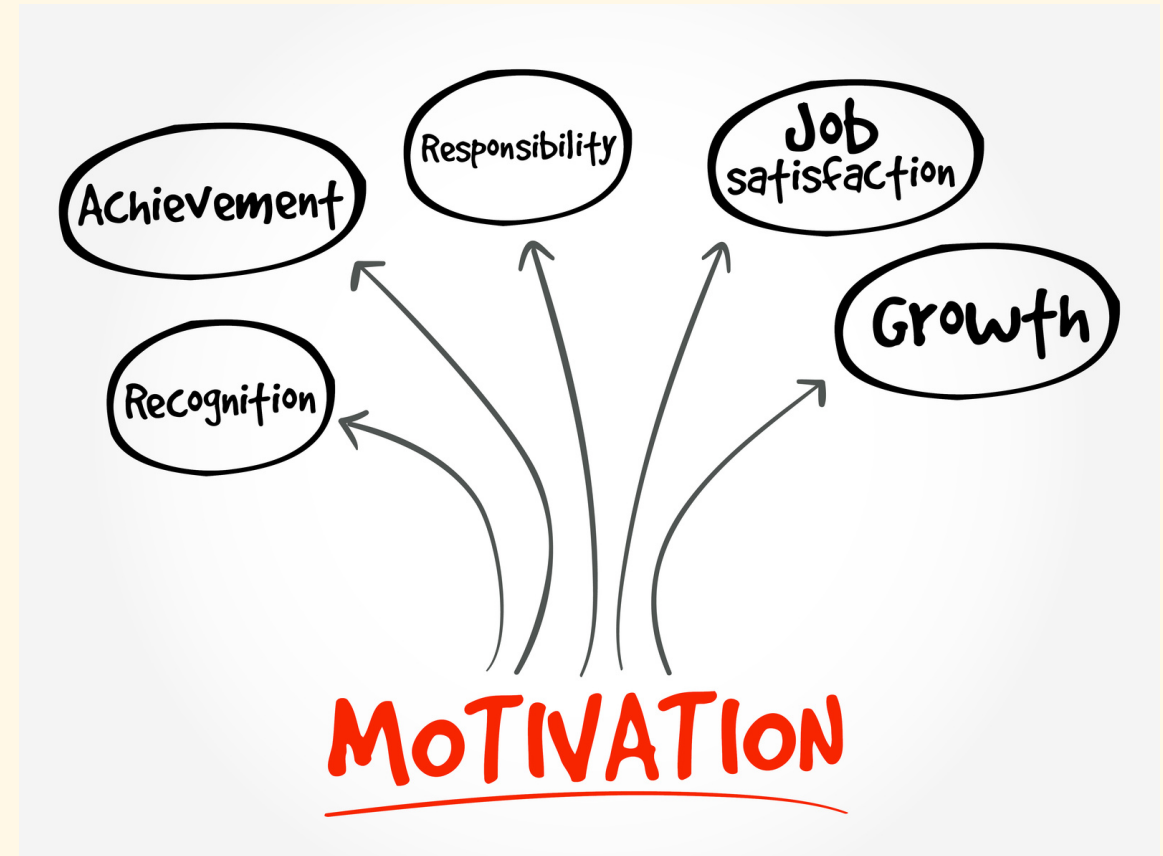

John Stacey Adams
American psychologist

Summary-Motivation Theories

- Content theorists do agree: individual needs activate tensions that **influence** attitudes and behavior.
- Content as 'what' influence people's decisions, +thought process as 'how' and 'why' those decisions are made.
- Application? Contemporary and cultural context (assumption about individuals, their priority, society), professionals ...

Keys for successful motivation

- **Accept** people as they are, not try to change them-personal preference, values and standards
- **Recognize** that other have drives to fulfill own needs – self-actualization, recognition, ego, self-esteem, group association, etc.
- **Motivate** by addressing the unsatisfied needs-Maslow Need Hierarchy Model
